Subject Index Vol. 2

- Bacterial enzymes and dental plaque formation, 38
- Bacterial polysaccharides, in caries etiology, 164
- Bicarbonate-phosphate additives, effect on plaque pH, 27
- Blood serum, fluoride determination, 69
- Bone-meal, effect on hamster caries, 338
- , reducing animal caries, 229
- Calcification, of plaque, 19
- Calcifying solution, effect on appearance of enamel caries, 87
- Carbohydrate, oral clearance, 214
- Carbonate, distribution in enamel, 1
- Caries, at different ages, 79
- , in animals, and bone meal, 229
- , effect of saliva and calcifying solutions on histologic appearance, 87
- , in gnotobiotic animals, 139
- , in hamsters, influence of bone meal, 338
- , pattern of enamel demineralization, 180
- , prevalence correlations, 79
- , possible preventive effect of molybdenum, 262
- Caustic lye stenosis of oesophagus, long-term effect on teeth, 347
- Clearance of oral carbohydrates, 214
- Demineralization, in enamel caries, 180
- Diabetes, maternal, and changes of primary teeth, 333
- Enamel, acquired integuments, comparative analytical studies, 294
- , carbonate distribution, 1
- Enamel, nature and importance of organic deposits, 104
- , pattern of carious demineralization, 180
- phosphate, liberation by enzymes, 317
- protein, histologic appearance and chemical composition, 281
- structure, studies by microradiography and two-dimensional microdensitometry, 235
- Enzymes, liberating phosphate from enamel, 317
- Fermentation, of glucose and sucrose by plaque streptococci, 193
- Fluoridation, of water, in German Democratic Republic, 172
- Fluoride, determination in blood serum, 69
- , effect of water intake on skeletal incorporation, 253
- , possible effect of molybdenum on distribution, 262
- Glycoprotein, in saliva, 306
- Gold plate technique, caries inhibition tests, 57
- Hamster caries, influence of bone meal, 338
- Immuno-fluorescence, in identification of plaque microorganisms, 273

- Integuments of enamel, comparative analytical studies, 294
- Laser rays, effects on teeth, 10
- Microdensitometry, two-dimensional, of enamel structure, 235
- Microradiography, of enamel structure, 235
- Micro-organisms, filamentous, in plaque, identification by immuno-fluorescence, 273
- Molybdenum, placental transfer and possible caries-preventive effect, 262
- Oesophageal stenosis from caustic lye, long term effect on teeth, 347
- Oral carbohydrate clearance, 214
- Organic deposits, on enamel 104
- Phosphate, liberation from enamel by enzymes, 317
- Plaque, 97
- , calcification, 19
 - , effect on pH by sucrose and bicarbonate-phosphate additives, 27
 - , formation as influenced by bacterial enzymes, 38
 - , histology and histochemistry, 115
 - microorganisms, identification by immuno-fluorescence, 273
 - , mode of formation, 130
 - streptococci, 147
 - , as fermentors of glucose and sucrose, 193
 - , synthesising intracellular polysaccharides, 201
- Polysaccharides, bacterial, in caries etiology, 164
- Polysaccharide, iodophilic, 47
- Polysaccharides, in plaque streptococci, 201
- Polysaccharide, synthesis by *Streptococcus salivarius*, 47
- Primary teeth, changes in maternal diabetes, 333
- Protein, of enamel, histologic appearance and chemical composition, 281
- Saliva, effect on appearance of enamel caries, 87
- , glycoprotein components, 306
- Scanning electron microscopy, of laser-exposed teeth, 10
- Skeleton, of mice, effect of water intake on fluoride incorporation 253
- Sodium hexafluorostannate, tests on caries inhibition, 57
- Stenosis of oesophagus from caustic lye, long-term effect on teeth, 347
- Streptococci, from plaque, as fermentors of glucose and sucrose, 193
- , of plaques, 147
 - , synthesising intracellular polysaccharides, 201
 - , α -haemolytic from plaque, fermentation capacity, 193
- Streptococcus salivarius*, synthesis of iodophilic polysaccharide, 47
- Water fluoridation, in German Democratic Republic, 172
- Water intake, effect on skeletal incorporation of fluoride, 253
- X-ray crystallography, of laser-exposed teeth, 10
